## The Construction of ISO Technical Organization Governance

WANG Yanlin YE Yating

**Abstract:** The ISO technical organization condenses the constraints of three structural and normative powers, namely the domestic law dominated by the Swiss civil law, the autonomous law with the ISO charter as the core, and the international law based on the principles of the WTO/TBT Agreement and the WTO/SPS Agreement, into a standardized code of activities oriented by openness, transparency and consensus, which embodies the superb governance wisdom of the international activities of NGOs and the art of actively participating in the integration of the global market. At the same time, ISO participates in global governance with ISO standards, realizing multi-level interaction between standards and their formulators. Through continuous reform, ISO has established the nature, structure, and operation and maintenance of the ISO technical organization, Technical Management Board, to ensure the legitimacy and rationality of the ISO organization, while contributing to the expected benefits of the market, and finally establishing its unique international legal status and global leading standard influence. Therefore, the path of wisdom constructed by ISO, as an international group, will offer a new perspective and worthy of consideration and reference for the direct internationalization of Chinese standards.

**Keywords:** ISO; Group Power; Technical Organization; Standard of Good Governance; International Standardization
